

WadzPay Token (WTK) is Now Available on XinFin's XDC Network: The Drive for Interoperability, User Choice, and Payment Flexibility

WadzPay Token (WTK) is available on XinFin's XDC Network as an XRC20 token marking the next step in a strategic technological partnership between the two major players, enhancing WTK cross-chain interoperability paving the path towards WTK being used for gaming, microtransactions, and remittances planned for 2022 amongst various other applications and use cases.

WTK will have a vital role in realizing WadzPay's drive for interoperability between payment protocols enabling conversion between CBDCs, stablecoins, and cryptocurrencies by bridging the 'old world' of fiat-based payments with the newest technologies of digital asset payments.

WadzPay currently offers issuance, acceptance, gaming, and remittance products. This partnership with XinFin will further enhance its offering with loyalty, tokenization, trade finance, and Buy Now Pay Later (BNPL) services over the coming months.

The XDC Network was selected by WadzPay as the ultimate protocol given its significantly faster transaction speed, negligible gas fees, and military-grade security, along with XinFin's focus on delivering applications for trade finance and remittances.

As part of WadzPay's core principle of interoperability and delivering value to its customers, WTK will be available on other leading protocols as well in the future to enable a variety of choice, allowing users to match the best protocol for their specific use cases.

"We are thrilled to expand WTK to one of the fastest-growing and innovative networks in the entire blockchain space, allowing us to solve interoperability issues in blockchain payments" stated Anish Jain, Managing Director and CEO of WadzPay.

"Once solution providers realize how strong and beneficial developing on the XDC Network is, it becomes a no-brainer decision to utilize our powerful technology. Even more special is how WadzPay will also partner with Impel for financial messaging and payments to service their customers better" ~ Troy S. Wood, Project Lead for Impel, the official ISO-20022 financial messaging and \$XDC payments startup born out of the XinFin Foundation.

Users will be able to utilise an easy-to-use bridge accessible at <https://bridge.wadzpays.com/> which will convert their WTK ERC-20 tokens into XRC20 tokens, instantly benefiting from the many advantages offered by the XDC Network.

Exchange support for WTK will be coming soon to allow users to choose between which blockchain protocol they wish to withdraw their tokens onto, as users shop around for low gas fees and fast transaction times.
